

Flashing Barricade Light Instructions

These lights have three functions, flash (type A), steady (type C), and off.

There is a Tamper-resistant internal three position switch to change to the different functions.

To Turn On: insert pin into hole labelled ON, push halfway in for steady on or all the way in for flash.

To Turn Off: insert pin into hole labelled OFF, push all the way in to turn off.

The flashing light only operates in darkness. The Photocell automatically turns the unit on at dusk and off at daybreak.

When switched on during daylight, light will only flash once to tell you it works, Runs on 1 or 2 6V lantern batteries.
